

Analysis Report

Data

Test name: 2019-06_INT_ISGLOBAL_20_kits

Number of devices tested: 20

Test date: 2019-07-13

Test author: Óscar González

Warnings

No warning for this test

Conclusions

Devices show normal behaviour.

- The devices showing higher deviation in temperature are not discarded, as well as noise.
- PM sensor showing lower PM values had the inlet covered
- ECOs/VOCS are evaluated for dispersion and show similar trends in indoor environment, although different absolute values, probably related to the stabilisation time
